

Position Title: Compressed Air Systems Specialist
Position Location: Portland, Oregon
Position Type: Direct Employee, Full Time

Job Description:

Pneu-Logic Corporation, a fast growing progressive company based in Portland, Oregon, designs and implements the world's most advanced industrial compressed air management and control systems. Energy costs have become a significant factor in the decision making process of industrial facility management and as such, energy efficiency coupled with reliability are the key design criteria in all Pneu-Logic management systems.

Pneu-Logic is looking for experienced and highly motivated Engineers to join our team. Responsibilities and duties would include:

- Perform compressed air system evaluations at customer manufacturing facilities.
- Develop instrumentation plans, including type of instrumentation and installation locations within the compressed air system, for energy data logging.
- Travel to customer facilities to manage the installation of data logging instrumentation.
- Perform baseline analysis and 'what if' scenario simulations on collected data.
- Interpret analysis and simulation results. Summarize findings in a written engineering report as a deliverable to customers.
- Manage the design and installation of Pneu-Logic management systems.
- Develop, review and approve engineering production drawings.
- Work with manufacturing to ensure panel build matches design; perform quality control tests.
- Work with customers to coordinate project schedules and deadlines.
- Operate in a technical consulting role for installation contractors and or customer installation personnel.
- Perform onsite systems testing for functionality and quality control.
- Perform management and control system start-ups at customer facilities.

Skills and Experience:

All applicants for this position must possess:

- University Degree – BS (or higher) in Engineering of similar is required. Professional registration is expected when eligible.
- Exceptional aptitude for problem solving and trouble shooting in both mechanical and electrical systems.
- Strong interpersonal communication skills, both verbal and written.

Educational Requirements and Additional Experience Preferences:

Engineering or technical support experience within the industrial compressed air industry would be helpful, but not absolutely required.

Travel Requirements:

The Compressed Air Systems Specialist position required occasional domestic and international travel. A Current and valid passport is required.

US Legal Status:

All candidates must provide documents proving their legal status in the US as follows:

- US Citizen
- US Permanent Resident
- Other US issued and valid Work permit

Employment at Pneu-Logic:

Pneu-Logic is an equal opportunity employer. All qualified candidate for this potions are encouraged to apply for consideration of employment. Pneu-Logic tries diligently to maintain a drug free environment for all of its employees. Pneu-Logic provides all of its employees with:

- Industry competitive compensation.
- Medical, dental and vision insurance benefits.
- Paid holidays, vacation, and sick leave.
- Possibility of Pneu-Logic equity ownership participation.

Pneu-Logic seeks highly motivated, goal oriented 'self starters', with a positive outlook on life, who enjoys the personal and professional satisfaction gained through successful design and implementation of engineered solutions for industrial compressed air systems.

Pneu-Logic offers excellent benefits including, 401k retirement plan, medical, dental, vacation, sick leave, and a path toward equity in the company. While pertinent experience largely dictates salary, all of our engineering staff are well compensated with highly competitive compensation packages within the industry.
